Thanks Julie! I'll reach out to Karen and answer her questions.

Thanks for forwarding this along,
Rob

Hi Karen:

Thanks for outreaching to EPA on your questions and concerns. I am forwarding your email to EPA staff located in our Denver, Colorado office. Rob Parker and Victor Ketellapper will oversee the site investigations this summer so they can better answer your questions about the extent of the sampling and next steps in the process. Rob and Victor work in our Site Assessment and Superfund Listing program. That is the phase the CFAC project is at. Once site data is collected EPA will determine if the information would warrant a proposal to list a site on the National Priorities List. All data collected will be shared with appropriate land owners and our assessments shared with the public. Rob and Victor will let you know what the our current schedule looks like and when you might be seeing initial data results.

Please let me know if you have other general questions and I will get you to the right folks.

Dear Julie

Good Morning my name is Karen South. I live near the Columbia Falls Aluminum Factory. Cedar Creek which is connected to CFAC runs directly into my property via a creek and forms a pond. My concern is how far reaching is the proposed Super Fund site. My well was tested 8 years ago but never the creek or pond for contaminants, I am not really even sure what to look for. I also need to have a remodel done on my home, it

was built in the 1970's without overhangs or gutters and siding is rotting so this all needs replaced. I am concerned about losing the value of my home and it is worth it to do this extensive remodel for nothing. I have never been a part of any environmental issues of this gravity and need to gain the knowledge to make informed decisions regarding my home.

I appreciate you are extremely busy but was hoping you could guide me or forward this email to the appropriate person to help me. Should I do an independent water test or is this something EPA would help me with? Has a project manager been assigned? I checked the EPA website for some of this information but was unable to ascertain it.

Thank you for any help
Karen South
